CAL-Amino B

Highly available plant active calcium formulation

Calcium (Soluble in water)	60g/L
<i>As neutralised Calcium Hydroxide</i>	
Amino acids and peptides	125g/L
Organic nitrogen	20g/L
Boron	2g/L

The inbuilt amino acid content of CAL-Amino B acts as a chelating agent with the calcium which makes it highly available to the plant. Therefore the rates of CAL-Amino B are much lower than with standard formulations

DIRECTIONS FOR USE

CROP	RATE	COMMENTS
TREES (excluding stonefruit), NUTS, BERRIES AND VINES	Foliar 0.5 to 0.75L/100L water Fertigation 4-6L/ha	Apply in a water volume of 400L to 1000L per ha. Apply at regular intervals of 7-14 days from petal fall up until harvest. May assist in the management of deficiency disorders such as bitter pit.
VEGETABLES Cucurbits, Fruiting Vegetables, Potatoes	Foliar & Fertigation 4-6L/ha	Apply in a water volume of 300 to 500L/ha. Apply from flowering up until harvest.
Caution: Do not apply as a foliar application in conjunction with copper fungicides. As CAL-Amino B contains a strong chelating agent, it will increase the activity of copper and levels of resulting phytotoxicity may not be acceptable to growers. Early morning or late afternoon spraying is the most effective. Avoid spraying in the middle of the day. Avoid application over foraging bees.
