Humic [K] WSP

Application Rates: Dry Product: 6 – 15 kg/ha applied throughout the crop cycle, divided into 4-5 applications.

Mixing and Compatibility Instructions for 12% w/w Humic [K] WSP

Humic [K] WSP is not compatible with fertilisers containing calcium or magnesium. Fertigation mixes with soluble fertilisers should not be mixed at a pH less than 6. A jar test is also recommended prior to mixing and application. To optimise the speed of solubilisation and to prevent the formation of lumps, add the product slowly to the mixing tank and agitate until solubilisation is achieved. The addition of an anti-foaming agent may be helpful during the solubilisation process.

Mix 1kg in 8L water or equivalent to 125kg in 1,000L water with agitation. Prior to application mix the concentrate in the ratio of 1L concentrate to 4L of water or add to tank mixture at desired concentration. Apply the concentrate mixture at 30 - 80L/ha, divided into 4 - 5 applications.
